                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC This invention describes a novel nucleic acid (N1) encoding a Chlamydia CC pneumoniae protein (P1), given in the specification. The isolated nucleic acid is useful for diagnostic and analytical methods, such as, CC hybridization-based assays or amplification-based assays. The protein may CC be used for diagnostic purposes, for their enzymatic or structural CC activity, or as a vaccine. The invention also describes (1) a probe CC comprising a hybridizing fragment of N1; (2) an isolated nucleic acid CC (N2) that hybridizes under stringent conditions to N1; (3) an expression CC cassette comprising N1 under the transcriptional regulation of a CC transcriptional initiation region functional in an expression bost, and a CC transcriptional itermination region; (4) a cell comprising an expression CC cassette of (3) as part of an extrachromosomal element or integrated into CC cassette into the host cell, and the cellular progeny of the host cell; C (5) a method for producing a P1 comprising growing a cell of (4) where CC the protein is expressed and isolating the protein free of other comprising of P1; and (7) a monoclonal antibody binding specifically to the

This DNA sequence codes for the novel 98.4 kba surface exposed protein Omp10 (see AAW88423) of the human respiratory pathogen Chlamydia pneumoniae. By generating antibodies against C. pneumoniae outer membrane complex, a polycional antibody (PAB 150) was obtained which reacted with outer membrane proteins. The antibody was used to identify the genes (see AAX06816-27) encoding Omp4-Omp15 proteins (see AAW88417-28) in an expression library of C. pneumoniae DNA. The genes are situated in 2 gene clusters: omp12,11,10,5,4,13 and 14 in one cluster and omp6,7,8,9 and 15 in the other, and encode polypeptides of about 89.6-100.3 kba and about 56.1 kba. The invention provides a new species specific test for identifying mammals (including humans) infected with Chlamydia pneumoniae The test Commission of Abroting antibodies of antibodies of the constant of the c
                                                                    pneumoniae. The test comprises detecting antibodies specific for Omp4-omp15 or detecting nucleic acid fragments encoding these outer membrane proteins, especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of mammals, the nucleic acids being particularly useful as DNA vaccines for effecting in vivo expression of antigens. The vaccines may also prevent atherosclerosis and bronchial asthma, which are possibly associated with C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   outer membrane proteins of C. pneumoniae or nucleic acids encoding these proteins

                                                                                                                                          This sequence encodes a Chlamydia antigen of the invention, designated CPN100635. The nucleic acids (and their complementary sequences) may be used as diagnostic agents for detecting the presence of nucleic acids encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosing Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction (PCR) assays. Antisense sequences may be used to down regulate expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they encode according to standard recombinant DNA methodologies. The proteins may then be used as antigens for the production of antibodies (i.e. as vaccines) for preventing infection by Chlamydia. The antibodies may also be used as diagnostic reagents for detecting infections. Chlamydia is a pathogen implicated in the development of the community acquired nonemonia unper respiratory tract
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       01-DEC-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  expression of the proteins and may be used to treat infections. The nucleic acids may also be used to produce the protein antigens they encode according to standard recombinant DNA methodologies. The proteins may then be used as antigens for the production of antibodies (i.e. as vaccines) for preventing infection by Chlamydia. The antibodies may also be used as diagnostic reagents for detecting infections. Chlamydia is a pathogen implicated in the development of (for example) community acquired pneumonia, upper respiratory tract disease (especially bronchitis and sinusitis, asthmatic bronchitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence encodes a Chlamydia antigen of the invention, designated CPN100638. The nucleic acids (and their complementary sequences) may be used as diagnostic agents for detecting the presence of nucleic acids encoding Chlamydia antigens in samples according to standard methods, and therefore, for diagnosing Chlamydia infections. For example, they may be used as primers and probes for diagnostic polymerase chain reaction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Nucleic acids encoding preventing, diagnosing pneumonia, bronchitis,

                                                                                                                  AAZ61502-09 encode Chlamydia pneumoniae polypeptides. The polypeptides are present in the bacterial membrane structure, in the external vicinity of the membrane structure, in the inclusion membrane structure, in the external vicinity of the inclusion membrane structure, and in the cytoplasm of the infected cell. The polypeptides may be used to prevent, treat and detect the presence of Chlamydia infection and/or the presence of Chlamydia in a sample. The polypeptides may also be used to induce an immune response in a mammal. The vaccine vector comprising the polynucleotides is used to induce an immune response in a mammal. Antibodies directed against the polypeptides may also be used therapeutically to treat and/or prevent a Chlamydia infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           20-AUG-1998;

protein Omp9 (see AAW88422) or the number comparison of Chlamydia pneumoniae. By generating antibodies against C. Chlamydia pneumoniae outer membrane complex, a polyclonal antibody (PAB 150) was obtained which reacted with outer membrane proteins. The antibody was used to identify the genes (see AAX06816-27) encoding Cmp4-Cmp15 proteins (see AAW88417-28) in an expression library of C. pneumoniae DNA. The genes are situated in 2 gene clusters: Omp12,11,10,5,4,13 and 14 in one cluster and Omp6,7,8,9 and 15 in the other, and encode polypeptides of about 89.6-100.3 kDa and about 56.1 kDa. The invention provides a new species specific test for identifying mammals (including humans) infected with Chlamydia pneumoniae. The test comprises detecting antibodies specific for
                                     omp4-omp15 or detecting nucleic acid fragments encoding these outer membrane proteins, especially by PCR. The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of mammals, the nucleic acids being particularly useful as DNA vaccines for effecting in vivo expression of antiquens. The vaccines may also prevent atherosclerosis and bronchial asthma, which are possibly associated with C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Species-specific test for identifying mammals infected with Chlamydia pneumoniae - comprises detecting antibodies specific for outer membrane proteins of C. pneumoniae or nucleic acids encoding

The proteins are also used in the diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of mammals, the nucleic acids being particularly useful as DNA vaccines for effecting in vivo expression of antigens. The vaccines may also prevent atherosclerosis and bronchial asthma,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   100767
     This DNA sequence codes for the novel 97.2 kDa surface exposed protein Omp5 (see AAW88418) of the human respiratory pathogen Chlamydia pneumoniae. By generating antibodies against c. pneumoniae outer membrane complex, a polyclonal antibody (PAB 150) was obtained which reacted with outer membrane proteins. The antibody was used to identify the genes (see AAX06816-27) encoding Omp4-Omp15 proteins (see AAW88417-28) in an expression library of C. pneumoniae DNA. The genes are situated in 2 gene clusters: Omp12,11,10,5,4,13 and 14 in one cluster and omp6,7,8,9 and 15 in the other, and encode polypeptides of about 89,6-100.3 kDa and about 56.1 kDa. The invention provides a new species specific test for identifying mammals (including humans) infected with Chlamydia
                                                                                                                                                                                                                                   Species-specific test for identifying mammals infected with Chlamydia pneumoniae - comprises detecting antibodies specific outer membrane proteins of C. pneumoniae or nucleic acids encoc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CDS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes a novel nucleic acid (N1) encoding a Chlamydia pneumoniae protein (P1), given in the specification. The isolated nucleic acid is useful for diagnostic and analytical methods, such as, hybridization-based assays or amplification-based assays. The protein may be used for diagnostic purposes, for their enzymatic or structural activity, or as a vaccine. The invention also describes (1) a probe comprising a hybridizing fragment of N1; (2) an isolated nucleic acid (N2) that hybridizes under stringent conditions to N1; (3) an expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           cassette comprising N1 under the transcriptional regulation of a transcriptional initiation region functional in an expression host, and a transcriptional termination region; (4) a cell comprising an expression cassette of (3) as part of an extrachromosomal element or integrated into the genome of a host cell as a result of induction of the expression cassette into the host cell, and the cellular progeny of the host cell; (5) a method for producing a P1 comprising growing a cell of (4) where the protein is expressed and isolating the protein free of other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Isolated nucleic acid for use in diagnostic and analytical methods encodes genomic sequence of Chlamydia pneumoniae \cdot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          12-NOV-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                       31998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     31878
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   31818
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents the complete genome of Chlamydia pneumoniae, and encodes proteins AAY34584-Y35879. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart disease, sarcoidosis, sinusitis, purulent otitis media, erythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY34584-Y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions, especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence

                                                      CC from Chlamydia pneumoniae. The genomic sequence was amplified using two CC pCR primers. The 5' primer contains a NotI restriction site, a ribosome CC pCR primers. The 5' primer contains a NotI restriction site, a ribosome CC the 98kDa putative outer membrane protein coding sequence close to the 5' end of CC the 98kDa putative outer membrane protein coding sequence of the putative contains the sequence encoding the C-terminal sequence of the putative contains the sequence encoding the C-terminal sequence of the putative conter membrane protein and a BsrGl restriction site. The stop codon was cervaluded and an additional nucleotide was inserted to obtain an in-frame CC terminal fusion with the Histidine tag. The PCR product was cloned conto a eukaryotic expression vector (pCA-Myc-His) by restricting both the vector and the PCR product with NotI and BamHl and performing a CC ligation reaction. This expression vector was injected intramuscularly cand intramasally into mice, which were subsequently inoculated with CC were lower than those of the controls. Thus the 98kDa putative outer membrane protein can be used as a vaccine to provide protection against CC chlamydia infections, especially Chlamydia pneumoniae infections. CC The polypeptide may also be administered orally to treat Chlamydia CC infection. The present sequence may also be used in the construction of attenuated Chlamydia strains that can over-express the cCC gene or express it in a non-toxic form.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    29-OCT-1998;

CC pneumoniae by generating antibodies against C.
CC pneumoniae outer membrane complex, a polyclonal antibody (PAB 150)
CC was obtained which reacted with outer membrane proteins. The
CC antibody was used to identify the genes (see AAX06816-27) encoding
CC Omp4-Omp15 proteins (see AAW88417-28) in an expression library of
CC pneumoniae DNA. The genes are situated in 2 gene clusters:
CC Omp12,11.10,5,4,13 and 14 in one cluster and Omp6,7,8,9 and 15 in
CC the other, and encode polypeptides of about 89.6-100.3 kDa and
CC about 56.1 kDa. The invention provides a new species specific test
CC for identifying mammals (including humans) infected with Chlamydia
CC pneumoniae. The test comprises detecting antibodies specific test
CC omp4-Omp15 or detecting nucleic acid fragments encoding these outer
CC membrane proteins, especially by PCR. The proteins are also used
CC in the diagnosis of C. pneumoniae infection in mammals. The
CC mammals, the nucleic acids being particularly useful as DNA
CC vaccines for effecting in vivo expression of antigens. The
CC vaccines may also prevent atherosclerosis and bronchial asthma,
CC which are possibly associated with C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ş
